# Experience the New Custom AHU for Healthcare

## Patient-centered innovation

Air-handling units (AHU) in healthcare serve the critical function of keeping patients and staff in carefully controlled environments to achieve key health goals.

A custom AHU enables your healthcare organization to:

- Control the environment based on the diverse needs of care teams and patients throughout the facility, such as specific temperature or air quality demands.
- Optimize air quality to protect patients and staff from potential contaminants and particulates.
- Reduce AHU noise pollution, contributing to the overall comfort of your facility.
- Adapt to special needs, like ultraviolet lights and humidification, to keep the focus on patient care.

## Performance-driven adaptation

YORK® has reinvented the custom AHU experience around the unique needs of healthcare building environments, eliminating obstacles and overcoming limitations without sacrificing performance. The advantages of YORK® Custom AHUs include:

- Scalability to match your staff and patient needs regardless of complexity.
- Upgradability that allows you to incorporate new technology over the lifetime of the unit.
- High-quality materials to increase the longevity of your custom AHU.
- Acoustiweir™ Technology to reduce unit sound levels.
- Redundant design elements to limit downtime for crucial units.

## True Custom Product

Build the ideal system for your patients and staff, and integrate your AHU into the unique architecture of your facility.

- Feature set allows for complete design freedom.
- Fit and finish are tailored to the site.
- Acoustiweir™ Technology that reduces sound levels while maintaining a compact unit footprint.
- Fan system redundancy that ensures greater uptime while using fewer fans and non-proprietary parts.

# Custom created for your ideal care environment

## Accelerated project cycle

The YORK® Custom AHU process is specifically designed for speed, supporting your care and efficiency goals.

- Streamlined manufacturing drives reduced lead times.
- Intuitive factory controls reduce project installation time.

## Life cycle savings

From design to implementation, the YORK® process integrates intelligent tools to control costs for healthcare organizations.

- Key manufacturing tasks are automated to reduce costs.
- Enhanced tools connect the consulting engineer to the project design phase.

## Application expertise

With your patients and staff in mind, YORK® backs every custom AHU with a team committed to realizing your healthcare vision.

- User-friendly selection and ordering interface.
- Educated and committed sales and support teams.

Elevate the potential of your healthcare environment with YORK® Custom Air-handling Units from Johnson Controls.

Look for the trusted AHRI Certified™ mark on HVACR products. It represents that the product has been independently tested by a credible third party to assure consumers of product performance.
